stairway to heaven

ArchLAB

From the minds of partners Steve Blatz and Antonio Pio Saracino comes a trio of forward-thinking products. The **Folded Layer** table's aluminum legs balance an undulating carbon-fiber top that, in turn, supports layers of wood veneer and glass. Moving from horizontal surfaces to vertical ones, the **Adjustable Skin** screen employs the high-torque hinges used on laptops to mount 6-by-8-inch fiberglass panels to a steel bracket, so the panels stay put wherever you angle them. Leftover panels get recycled as shades for **Expanding Horizontal**, a pendant fixture built around a translucent acrylic tube. The LEDs inside generate minimal heat—though we think the look is hot. infoBarchlabstudio.com
